OUR STORY

RONALD REUBEN
Founder and Executive Chairman

Founded in 1988 by Ronald Reuben, the Medicom® Group is one of the world's leading manufacturers and distributors of high-quality, single-use, and preventive infection control products, primarily serving the medical, dental, and industrial markets.

Operating in over 95 countries, Medicom has been a key player in the fight against epidemics and pandemics since its inception, including HIV, avian flu, SARS, H1N1, Ebola virus, and COVID-19.

VISION

Medicom® is the B2B partner and **expert that develops, manufactures, and sells solutions** to protect against and prevent contamination and infections.

MISSION

Medicom® **protects people and mitigates risks** by listening, responding, and anticipating customer needs, creating value through services and solutions that provide peace of mind and exceed customer expectations.

VALUES

- . Responsibility
- . Customer Orientation
- . Team Spirit
- . Empathy
- . Sustainable Development

OVER 100 YEARS OF EXPERIENCE IN EUROPE

- 1921** **INSTALLATION OF THE FACTORY IN ANGERS**, specializing in the production of cigarette paper.
- 1972** **THE FIRST PAPER MASK.** Kolmi® manufactures Europe's first paper mask. A revolution in medical equipment!
- 1975** **THE FIRST NON-WOVEN MASK.** Kolmi® designs the first single-use, non-woven mask combining protection and comfort.
- 1988** **FOUNDING OF THE MEDICOM® GROUP**
- 2003** **CREATION OF THE HOPEN BRAND**, specializing in single-use personal protective equipment.
- 2010** **CREATION OF KOLMI HOPEN®** to provide comprehensive head-to-toe protective solutions.
- 2011** **KOLMI HOPEN® JOINS THE MEDICOM® GROUP**, a globally recognized Canadian specialist in dental equipment.
- 2012** **LEADING FRENCH MANUFACTURER OF MEDICAL MASKS.** Kolmi® becomes the first manufacturer to supply surgical masks for operating rooms across France.
- 2020** **NEW PARTNERSHIP WITH LOSER GMBH**, to expand our presence in the European dental sector with the acquisition of LOSER GMBH.
THE COVID-19 CRISIS: a major turning point with a sharp increase in production to meet all demands.
- 2021** **CREATION OF MANIKHEIR**, the first nitrile glove manufacturing facility in France.
Awarded EcoVadis silver medal, marking the beginnings of a recognized CSR initiative.
- 2022** **STRATEGIC ALLIANCE WITH WEESAFE.** Acquisition of WeeSafe, a recognized leader in body protection through its Category III PPE garments.
- 2023** **NEW IDENTITY!** KOLMI HOPEN® continues its mission to create a European entity closely linked to the group, rebranding as Medicom SAS for the Medical/Industry sector and Medicom GMBH for the Dental sector.
- 2024** **INAUGURATION of the 4 ManiKHeir production lines**, representing a capacity of over 900 million gloves per year.
Awarded EcoVadis gold medal.

CSR COMMITMENT

In line with Medicom's values for several years, we have chosen to structure our societal approach based on the fundamental principles of ISO 26000.

This is reflected in the management of our environmental impacts, the performance of our teams, the quality of our products, and our commitment to our customers and partners in compliance with current standards and regulations.

Our mission is based on commitments that demonstrate our intention to take responsibility for sustainable development.

OUR AREAS

- **Ensure** a safe, motivating, and sustainable working **environment** for our employees.
- Introduce innovative and high-quality products to the market while **minimizing their impacts**.
- **Have a positive external influence** on the social, economic, and environmental challenges of tomorrow.
- Promote the development of a **sustainable value chain**.

Since 2023, we have also been committed to **the United Nations Global Compact's** corporate social responsibility initiative by supporting its ten principles on Human Rights, labor standards, the environment, and the fight against corruption.

1 RESOURCES, PROCESSING AND SUPPLY

Responsible Use of Raw Materials

We carefully select raw materials to ensure they are environmentally friendly, without compromising the quality and durability of our products. **Some of our products are made from recycled materials, thereby reducing our consumption of fossil resources.**

Low-Impact Transformation Processes

When selecting our raw material and finished product suppliers, we prioritize processes that are energy and water-efficient.

A Network of Committed Partners

We collaborate with both local and international suppliers, ensuring they share our values regarding Human Rights and environmental protection. **We encourage short supply chains to limit our carbon footprint, and our long-term relationships with our partners ensure a stable and ethical supply.**

2 MANUFACTURING, DISTRIBUTION AND USE

Optimization of Our Production Chains

Our manufacturing sites are committed to a continuous improvement approach to reduce the environmental impact of production processes and working conditions.

Optimized Logistics and Transport

We are rethinking our distribution systems to limit the carbon footprint associated with transporting our products: Consolidating shipments to reduce the number of trips and using low CO2 emission transport methods.

Sustainable Packaging

Reduction of plastic packaging, use of recyclable materials, and fibers from sustainably managed forests for our products made in France, with optimized printing designs to reduce resource use.

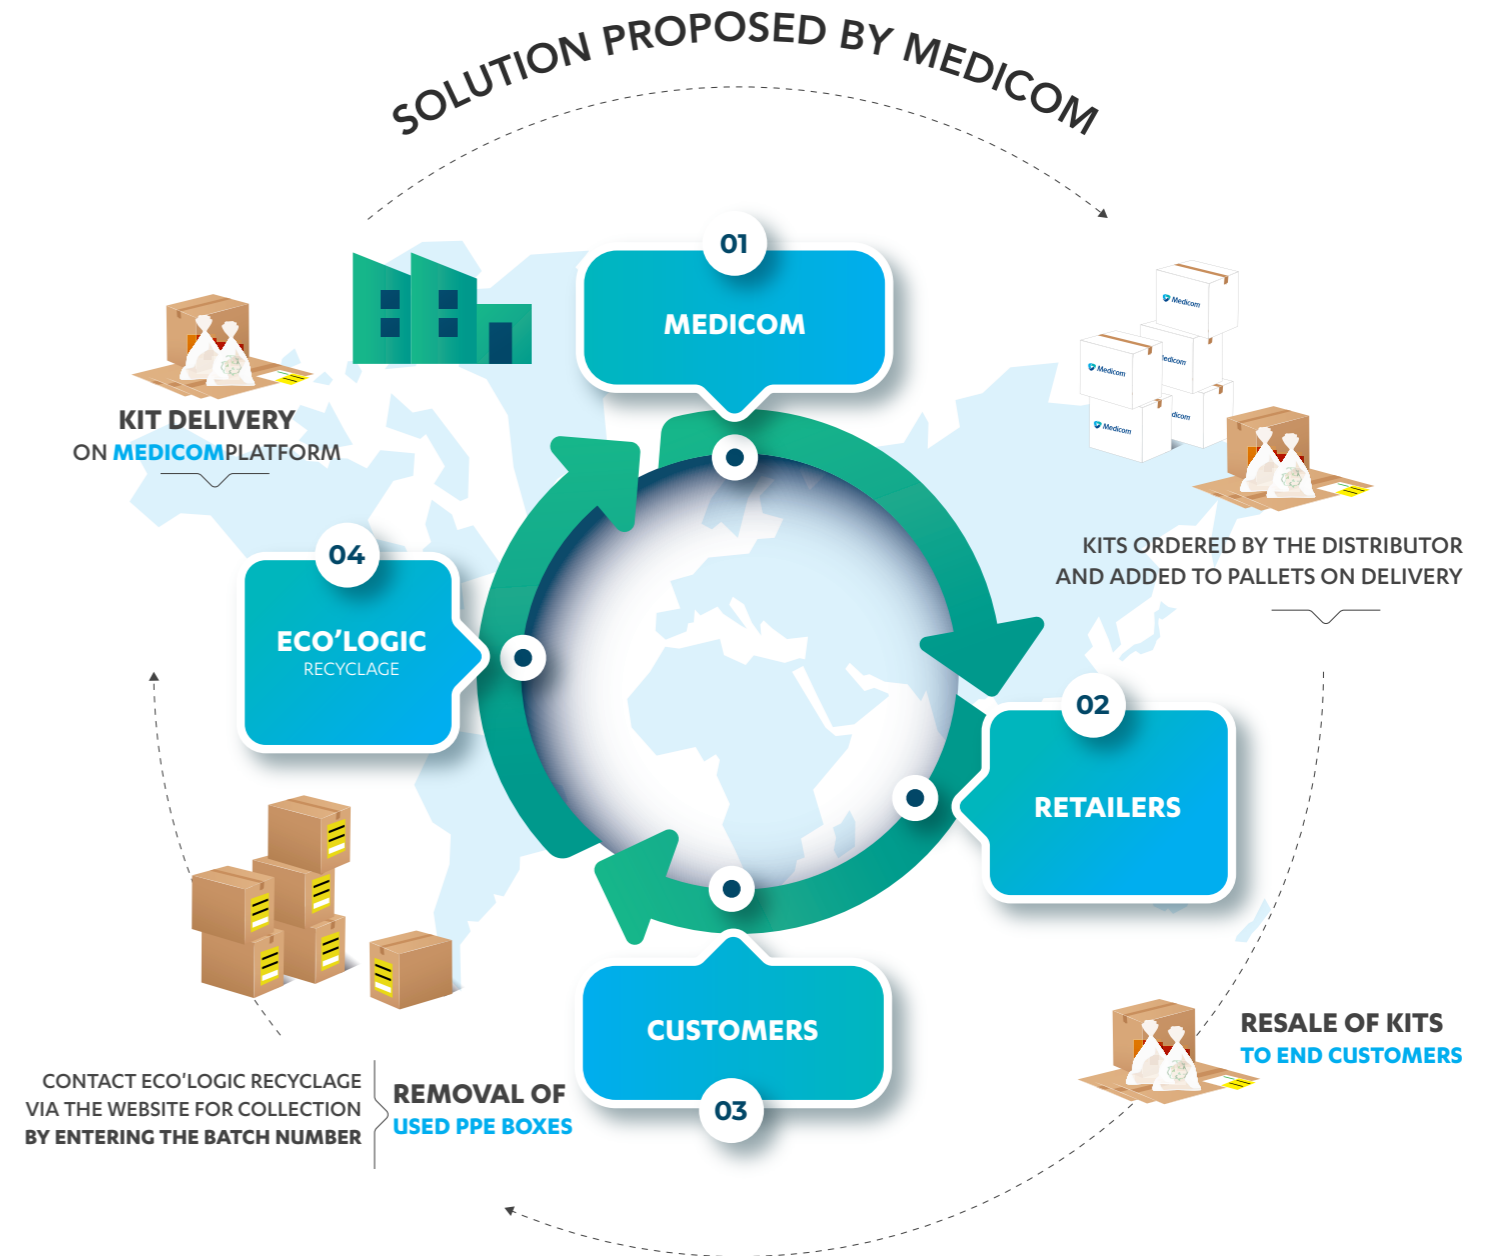

RECYCLED MATERIALS

Concerned with preserving fossil energies and reducing the carbon impact of our productions, we incorporate recycled polypropylene into the design of our FFP masks, cleanroom masks, and shoe covers.

We use various processes, including the "Mass Balance" process, which tracks the flow of raw materials and recycled products throughout the value chain, and the PIR (Post-Industrial Recycling) process.

3 END OF LIFE OF PRODUCTS AND RECYCLING

Our goal is to promote a circular economy by committing to develop recycling and recovery solutions. We have partnered with Eco'Logic Recyclage to offer a **MADE IN FRANCE** solution for recycling single-use, flexible PPE made of polypropylene.

MEDICAL MASKS

Definition

1. They protect the environment from the disease-causing agents transmitted by droplets emitted from the wearer's mouth and nose.
2. They protect healthcare professionals from projections of potentially contaminated body fluids (Type IIR).

Regulations

EN 14683:2019+AC:2019 - REQUIREMENTS

It defines the performance requirements for masks for medical use, taking into account various criteria that guarantee the quality of the mask and the safety of the wearer's environment:

- | Microbial cleanliness (Bioburden)
- | Bacterial filtration efficiency (BFE)
- | Breathability (Delta P)
- | Resistance to body fluid projections (Type IIR only)
- | Biocompatibility (Bioburden)

FURTHER TESTS, NOT REQUIRED BY STANDARD EN 14683

To guarantee further protection for users, Kolmi® masks are tested for viruses and submicron particles using two tests:

- | Viral filtration efficiency (VFE)
- | Filtration efficiency for particles of 0.1 µm (PFE)

DIFFERENT TYPES OF FASTENERS:

ELASTIC EARLOOPS

This is the most common type of fastener. Easy to put on and take off.

TIES-ON

This is the most comfortable type of fastener for longer surgical procedures.

ELASTIC HEADLOOPS

This system combines the ease-of-use of traditional earloops with the comfort of ties that are placed behind the head and neck.

Our Product Range

We offer a complete range of single-use medical masks to meet all needs: with ties-on or elastic, suitable for various sectors.

Kolmi®
Vitals

Kolmi®
Softex

Kolmi®
Feeldry

Our masks are made from the highest quality raw materials sourced from the best global non-woven manufacturers. These raw materials, combined with Kolmi's technological expertise, ensure that our masks provide excellent breathability and absolute comfort while maintaining a high level of protection.

- THE KOLMI® HEM**
The top and bottom of our Softex and Feeldry elastic masks are lined with a hem for the wearer's comfort and to enhance their durability.
- INTEGRATED NOSE PIECE**
The integrated nose piece allows our masks to fit perfectly to various face shapes.
- EXCEPTIONAL BREATHABILITY**
Our masks are designed to provide excellent breathability and exceptional comfort for everyday use. Their performance exceeds the requirements of the EN 14683 standard.
- THE KOLMI® SMILE**
The Kolmi® smile is designed to help the mask fit comfortably on all face shapes, thereby enhancing breathability.
- KOLMI® ORIGAMI FOLD**
The omega-shaped folding allows the mask to pre-form to the wearer's face. The fold also ensures a proper fit and comfort for the wearer.
- BACTERIAL FILTRATION EFFICIENCY**
Our medical masks provide exceptional bacterial filtration efficiency.
- SOFT RAW MATERIALS**
Our masks provide unmatched comfort for wearers with sensitive skin. The face piece, earloops, head-loops, and ties-on are made from soft materials. To enhance this comfort, our masks are guaranteed latex-free.

NEW
DIGITAL INSTRUCTIONS
ON THE PACKAGING

CONTROLLED ENVIRONMENT ZONE

Our tie-on masks and headloop or FFP masks, used in operating rooms or controlled environments, are manufactured in a Controlled Environment Zone. Our controlled environment contributes to the continuous microbial cleanliness of our masks and ensures their immediate operability for our customers.

MEDICAL MASK WITH OPTIONS

Technologies for the protection of frontline workers.

ANTI-FOG

Prevents the formation of fog on glasses.

ANTI-SPLASH

With an integrated visor in the mask, it provides facial protection against biological liquid splashes.

ANTI-GLARE

Reduces the risk of glare in high-intensity light environments and minimizes mask reflection for glasses wearers.

MEDICAL MASK

Kolmi®
Softex

- The Kolmi® Softex range is made of soft, non-irritating materials, ensuring lasting comfort and protection for the wearer.
- Certified as a Class I Medical Device according to the EN14683:2019+AC:2019 standard.
- Tested according to BFE, VFE, and PFE standards.
- Made in France.

RESPIRATORY PROTECTIVE MASKS (FFP)

Definition

A respiratory protective mask is a Category III Personal Protective Equipment (PPE) that covers the mouth, nose, and chin. Also known as FFP masks (Filtering FacePiece), they protect the wearer from inhaling droplets and airborne particles that can carry infectious agents.

The role of the respiratory protective mask:

- It protects the wearer from airborne particles.
- There are three levels of filtration efficiency for airborne particles.
- Standard EN 149:2001+A1:2009
- Regulation EU 2016/425

Minimum filtration of FFP masks:

TOTAL INWARD LEAKAGE TEST

	MAXIMUM LEAKAGE LEVEL	
	*	**
FFP1	≤ 22 %	≤ 25 %
FFP2	≤ 8 %	≤ 11 %
FFP3	≤ 2 %	≤ 5 %

BACTERIA AND VIRUSES
DROPLETS PROJECTIONS

The test measures inward leakages from the sealing joint, valve and filter medium

FILTER MATERIAL PENETRATION TEST

	TEST WITH SODIUM CHLORIDE 95 L/MIN	TEST WITH PARAFFIN OIL 95 L/MIN
	FFP1	≤ 20 %
FFP2	≤ 6 %	≤ 6 %
FFP3	≤ 1 %	≤ 1 %

The test measures the % of solid (sodium chloride) or liquid (paraffin oil) particles that penetrate the mask

BREATHING RESISTANCE TEST

	INHALATION		EXHALATION
	30 L/MIN	95 L/MIN	160 L/MIN
FFP1	≤ 0,6	≤ 2,1	≤ 3
FFP2	≤ 0,7	≤ 2,4	≤ 3
FFP3	≤ 1	≤ 3	≤ 3

The test measures the maximum permitted resistance (mbar)

* results for at least 8 of the 10 arithmetic averages for each wearer
** results for at least 46 of the 50 individual exercise results

AVAILABLE IN 3 SIZES:

MAIN AREAS OF USE:

PROTECTION AGAINST HAZARDOUS INFECTIOUS DISEASES in accordance with national recommendations in force

OUR RANGE AND MAIN APPLICATIONS

COMFORT & PROTECTION

Our FFP masks feature knitted cross-elastic straps that are ultrasonically welded to ensure the best possible fit. Easy to put on, they are comfortable to wear for extended periods of use.

EXCELLENT FIT

Our FFP masks are available in three sizes* and feature a flexible integrated nose bar to ensure the best possible fit. *According to the level of protection.

NON-WOVEN LAYERS MADE OF SPUNBOND AND MELTBLOWN

FFP masks are a blend of layers composed of Spunbond and Meltblown materials to ensure maximum protection with unmatched comfort.

SOFT RAW MATERIALS

Our respiratory protective masks are latex-free, and the inner layer is made of lightweight and soft material to provide the wearer with the best possible protection and comfort.

EXCEPTIONAL BREATHABILITY

Kolmi® FFP masks offer exceptional breathability thanks to the use of the finest raw materials on the market.

NEW DIGITAL INSTRUCTIONS ON THE PACKAGING

MASS BALANCE

Concerned about preserving fossil resources and reducing the carbon impact of our production, we incorporate recycled polypropylene into the design of our FFP masks using Mass Balance technology*.

*Mass Balance is a concept that allows for tracking the flows of raw materials and recycled products throughout the value chain.

RESPIRATORY PROTECTIVE MASKS (FFP)

Kolmi® Oxygen

- The Kolmi® Oxygen range ensures optimal comfort through the use of soft and flexible materials for a pleasant feel, even during prolonged use.
- It allows for easy breathing without compromising protection.
- Available in three sizes to fit all face shapes.
- Certified as a Class I Medical Device according to standard EN 14683:2019+AC:2019 and as Personal Protective Equipment (PPE) of Category III according to standard EN 149:2001+A1:2009.
- Entirely manufactured in France, the Kolmi® Oxygen range incorporates at least 70% recycled materials in its composition (FFP1, FFP2 & FFP3).

CLEAN ROOM & CONTROLLED ENVIRONMENTS FACE MASKS

Our Range & Main Applications

In cleanrooms, masks are primarily used to protect the environment of the wearer, but they can also provide protection for the user; this is particularly true for our FFP masks (Category III PPE).

Thanks to their very low-emission materials, the ISO AIR® range has been specifically designed to ensure user comfort and environmental protection. With filtration efficiencies exceeding 99%, ISO AIR® masks provide excellent bacterial, particulate, and viral filtration capabilities while offering comfortable breathability for the wearer.

Finally, mindful of its ecological footprint, Medicom® is the first company to develop a range of masks made from recycled materials using the Mass Balance approach.

The entire ISO AIR® range has been tested using the Helmke drum according to the IEST-RP-CC003.4 method to ensure its very low particulate emission. Thus, ISO AIR® masks can be used in environments starting from ISO 3 Grade A and above.

HEADLOOPS STERILE

MADE IN FRANCE

- Use in ISO 3 Class A environments
- Sterility Assurance Level 10⁻⁶
- Tested before and after sterilization, filtration performance (BFE, PFE, VFE > 99%) and comfort remain strictly identical
- Sterilization process according to ISO 11135 standard governing ETO sterilization of healthcare products
- Optimal fit and adjustment thanks to the crosswise elastic bands
- Excellent breathability

REF.				
60.702-STE		210 x 90 mm	Polybag	6 u x 50

CLEANROOM MASKS & CONTROLLED ENVIRONMENTS

HEADLOOPS NON STERILE

MADE IN FRANCE

- Designed for use in ISO 3 Class C environments
- Excellent filtration efficiency (BFE, PFE, and VFE > 99%)
- Easy to put on and increased comfort thanks to cross elastic bands
- Available in two sizes

REF.				
60.701-30		230 x 90 mm	Double packed	50 u x 6
60.702		210 x 90 mm

COMPLIES WITH REQUIREMENTS
OF REGULATION (EC) 1935/2004 (FOOD CONTACT)

EUROPEAN REGULATION 2017/745 RELATING TO MEDICAL DEVICES

EUROPEAN STANDARD EN 455 SINGLE USE MEDICAL GLOVES (MD)

This series of standards applies to medical gloves, which are designed to provide a barrier between patient and user against cross-contamination. The series of standards EN 455 consists of 4 parts:

EN 455-1:2020+A2:2024 REQUIREMENTS AND TESTING FOR DETECTION OF HOLES

Gloves are subjected to water-tightness testing to detect any holes. The test is carried out on a statistical sample (taken in accordance with ISO 2859-1).

EN 455-2:2024 REQUIREMENTS AND TESTING FOR PHYSICAL PROPERTIES

The standard specifies the requirements and test methods relating to the physical properties of medical gloves, such as dimensions and breaking strength, before and after accelerated ageing.

	EXAMINATION / PROCEDURE GLOVES Latex / Nitrile	EXAMINATION / PROCEDURE GLOVES Thermo-plastic polyvinyl chloride, polyethylene
Breakage strength in Newtons (N)	≥ 6.0	≥ 3.6

EN 455-3:2023 REQUIREMENTS AND TESTING FOR BIOLOGICAL EVALUATION

The standard describes the requirements and test methods for evaluating the biological safety of medical gloves.

This involves assessing factors such as:

1. Endotoxin content (for sterile gloves only)
2. The quantity of talcum powder
3. Chemical components used in manufacturing processes - accelerators, antioxidants, biocides
4. Extractable proteins (for latex gloves)
5. Biocompatibility (in accordance with EN ISO 10993-1:2020)

EN 455-4:2009 DETERMINATION OF SHELF LIFE

The standard is used to determine the expiry date, the date beyond which the integrity of the glove's properties can no longer be guaranteed. The maximum possible shelf life for a medical glove is 5 years from the date of manufacture.

EUROPEAN REGULATION 2016/425 RELATING TO PERSONAL PROTECTIVE EQUIPMENT

CATEGORIES

- CATEGORY I** protects against minor risks
CATEGORY II protects against intermediate risks; certified by a notified body.
CATEGORY III protects against life-threatening risks (microbiological, chemical, etc.) certified and checked annually by a notified body. (notified body number must be stated)

STANDARD EN ISO 21420:2020+A1:2024

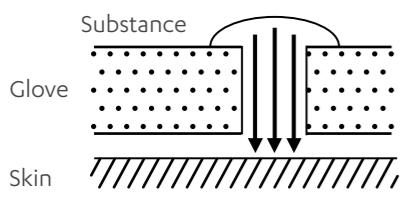

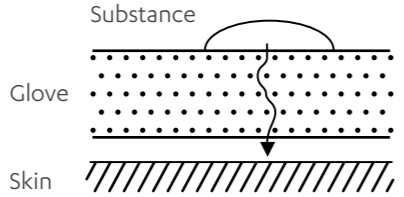

General requirements and test methods applicable to all personal protective gloves.

It covers:

- | The design and construction of the glove
- | Electrostatic property (optional)
- | Innocuousness
- | Comfort and efficiency
- | Marking and information provided by the manufacturer

STANDARD EN ISO 374-1: 2016+A1:2018 PROTECTION AGAINST CHEMICALS

How do you determine a glove's resistance when in contact with a chemical?

PENETRATION	PERMEATION	DEGRADATION
<p>Penetration describes the passage of a chemical through the imperfections of the material, or the pores and joints of the glove*.</p> 	<p>Permeation is the diffusion of a chemical, on a molecular level, through the glove material*.</p> 	<p>Degradation concerns the determination of resistance to degradation by chemicals. Degradation = transformation with deterioration of one or more properties of the glove material, after being in contact with a chemical. For example, peeling, swelling, disintegration, weakening, discoloration, dimensional variations, hardening, softening, etc.</p>

* Source: French National Research and Safety Institute

The standard is based on 3 test methods:

- | Penetration test under standard EN ISO 374-2:2019
- | Permeation test under standard EN 16523-1:2015+A1:2018
- | Degradation test under standard EN 374-4:2019

These three tests must be carried out in order to claim that the glove provides protection against a chemical. The results are stated on the product information leaflet.

CHEMICAL PERMEATION: EN 16523-1:2015+A1:2018

The risk of chemical permeation is defined as the substance passing through the glove. The migration of chemical molecules through the glove is determined by the breakthrough time (in minutes) of the chemical through the glove. The choice of glove is based on its level of performance (breakthrough time) which determines whether it belongs to a type of protection (A, B or C).

1 pictogram & 3 types of protection:

TYPE OF GLOVE	REQUIREMENT	EXAMPLE OF MARKING
Type A	Breakthrough time \geq 30 mins for at least 6 chemicals	
Type B	Breakthrough time \geq 30 mins for at least 3 chemicals	
Type C	Breakthrough time \geq 10 mins for at least 1 chemical	

Official list of chemicals listed for standard EN ISO 374-1:2016+A1:2018

A	Methanol	67-56-1	Primary alcohol
B	Acetone	67-64-1	Ketone
C	Acetonitrile	75-05-8	Nitrile compound
D	Dichloromethane	75-09-2	Chlorinated hydrocarbon
E	Carbon disulphide	75-15-0	Sulfur-containing organic compound
F	Toluene	108-88-3	Aromatic hydrocarbon
G	Diethylamine	109-89-7	Amine
H	Tetrahydrofurane	109-99-9	Heterocyclic and ether compound
I	Ethyl acetate	141-78-6	Ester
J	n-Heptane	142-82-5	Saturated hydrocarbon
K	Sodium hydroxide 40%	1310-73-	Inorganic base
L	Sulfuric acid 96%	7664-93-9	Inorganic mineral acid, oxidising
M	Nitric acid 65%	7697-37-2	Inorganic mineral acid, oxidising
N	Acetic acid 99%	64-19-7	Organic acid
O	Ammonia 25%	1336-21-6	Organic base
P	Hydrogen peroxide 30%	7722-84-1	Peroxide
S	Hydrogen fluoride 40%	7664-39-3	Inorganic mineral acid
T	Formaldehyde 37%	50-00-0	Aldehyde

STANDARD EN ISO 374-5: 2016 PROTECTION AGAINST MICRO-ORGANISMS

The gloves must comply with the liquid-tightness test in accordance with standard EN ISO 374-2:2019.

It is also possible to claim protection against viruses if the glove complies with test ISO 16604: 2004 (method B).

 <p>EN ISO 374-5:2016</p>	<p>For gloves that protect against bacteria and fungi</p>
 <p>EN ISO 374-5:2016 VIRUS</p>	<p>For gloves that protect against bacteria, fungi and viruses</p>

OTHER STANDARDS

Size guide:

SIZE	Circumference of hand (in mm)	Length of hand (in mm)	Minimum length of glove (in mm)
T6 XS	152	160	240
T7 S	178	171	240
T8 M	203	182	240
T9 L	229	192	240
T10 XL	254	204	240
T11 XXL	279	215	240

OUR RANGE & APPLICATIONS

We offer a wide range of nitrile, latex, and vinyl gloves, as well as polyethylene gloves. Available in various sizes from XS to XXL, most are packaged in cartons of 10 boxes of 100 gloves.

Manufactured in compliance with current standards, DM and/or PPE and/or food contact regulations, they are suitable for use in the food industry, medical sector, or industrial applications.

NITRILE

SYNTHETIC RUBBER

Ideal for users sensitive to or allergic to natural latex.

PROTECTION

High resistance against punctures, chemicals, and contamination.

DEXTERITY

Great elasticity, optimal fit, and textured fingertips for precise handling.

COMFORT

Tactile sensitivity nearly identical to latex and optimal comfort during prolonged use.

DURABILITY

Robust, with excellent longevity (three times more resistant than latex).

PPE CAT III COVERALL

Definition

Personal Protective Equipment (PPE) is worn by an individual to protect them against one or more external risks. The assessment of hazardous phenomena is carried out based on their frequency and severity. PPE is designed to protect individuals exposed to dangers.

The choice of appropriate PPE results from a risk analysis related to exposure to hazards.

Regulation

CATEGORY III SUITS AGAINST MAJOR RISKS ACCORDING TO REGULATION (EU) 2016/425 ON PERSONAL PROTECTIVE EQUIPMENT

Protective clothing against chemical hazards is classified into 6 types based on the risk of exposure. It is the responsibility of the user (or the company providing the PPE) to assess hazardous phenomena based on their frequency and severity (risk analysis). The tests conducted include leakage tests of the suit as well as tests for the mechanical performance of the material.

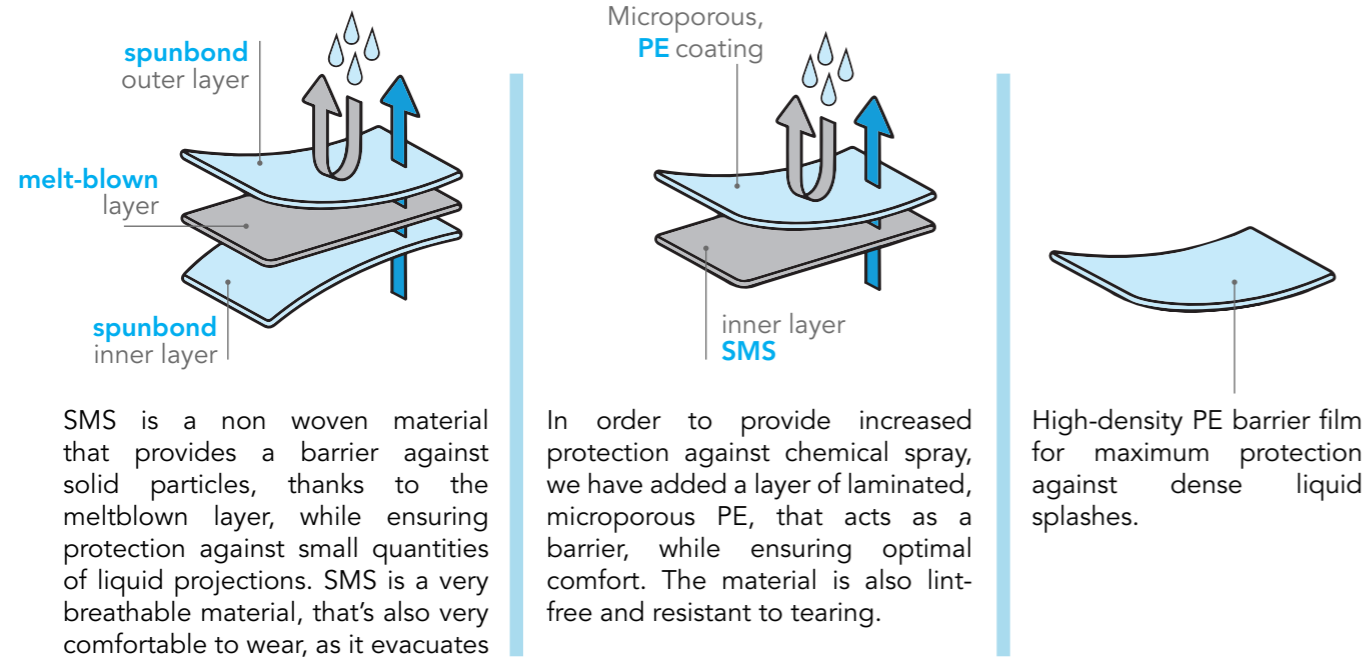

TYPE	MEANING	ASSOCIATED STANDARD
	GENERAL REQUIREMENTS FOR PROTECTIVE CLOTHING	EN ISO 13688
6	SPLASH Protection against small quantities of accidental splashes of liquid chemicals	EN 13034
5	SOLID PARTICLES Protection against airborne solid particles	EN ISO 13982-1
4	SPRAY Protection against spray of liquid chemicals	EN 14605
3	LIQUID PRESSURE JETS Protection against chemical substances in the form of pressurised liquid jets	EN 14605

Coveralls categorised for a particular type of protection can also have additional protective properties related to a specific work environment.

TYPE	MEANING	ASSOCIATED STANDARD
⚡	PROTECTION AGAINST ELECTROSTATIC DISCHARGE	EN 1149-5
☢	PROTECTION AGAINST SOLID RADIOACTIVE PARTICLES Does not provide protection against nuclear radiation.	EN 1073-2
☣	PROTECTION AGAINST INFECTIOUS AGENTS (viruses, bacteria, fungi, etc.). Recognisable by the letter « B » stated after the Type. Ex.: Type 4B	EN 14126

Our range & main areas of use

Our category III coveralls are suitable for the requirements of various sectors of activity & meet the needs of different professions in particular for use in a protected environment (Helmke drum test to measure particle release). They are made from a non woven SMS with a laminated PE coating for guaranteed protection and comfort.

SMS is a non woven material that provides a barrier against solid particles, thanks to the meltblown layer, while ensuring protection against small quantities of liquid projections. SMS is a very breathable material, that's also very comfortable to wear, as it evacuates perspiration.

In order to provide increased protection against chemical spray, we have added a layer of laminated, microporous PE, that acts as a barrier, while ensuring optimal comfort. The material is also lint-free and resistant to tearing.

High-density PE barrier film for maximum protection against dense liquid splashes.

Depending on their level of protection and intended use, our products are manufactured with various types of seams:

4-thread overlock stitch

Good mechanical resistance
Suitable for protection against projections of light liquids and solid particles (Type 5 and 6)

Seams covered with a heat-treated adhesive tape

Greater mechanical resistance and tightness against dust and finer particles.
Compulsory under the French decree of 7 March 2013 on exposure to asbestos

Bound seams

This type of seam can be edged on the inside or outside for greater comfort and is covered with a non-woven bias for absolute mechanical strength while guaranteeing very good liquid-tightness.

Which garments for which types of exposure?

SOLID					
LIMITED SPLASH					
SPRAY					
LIQUID JET

HYGIENE GARMENTS

Short-use garments

We offer a wide range of single-use personal protective equipment, including gowns, coveralls, aprons, pants, and tunics for healthcare personnel.

These protective garments help shield users from potential splashes in various settings, such as factory visits, maintenance or cleaning tasks, and industries like chemical, petrochemical, or food processing. They are also suitable for catering, public sector, medical environments, and any other area with risks of dirt or contamination.

COVERALLS AND GOWNS

HYGIENE COVERALLS POLYPROPYLENE HOOD ZIP

OUR OFFERS

PREMIUM OFFER

Kolmi® Skidguard

MADE IN FRANCE

Our **Kolmi®Skidguard** shoe covers are hydrophobic and truly anti-slip, thanks to their soles developed with exclusive technology. They are ideal for humid environments and smooth floors, and are suitable for use in operating rooms. Our shoe covers are tested according to the bioburden requirements of standard EN ISO 11737-1 and are certified as Class 1 Medical Devices.

Kolmi® Isoguard

MADE IN FRANCE

Hydrophobic and anti-slip like the **Kolmi®Skidguard** technology, the **Kolmi®Isoguard** range, with reinforced soles, is tested using the Helmke Drum to ensure its low particulate release.

CHEMICAL PROTECTION
SHOE COVERS OR BOOT COVERS

With or without soles, made of microporous or polyethylene materials, they provide an excellent barrier against fine particles, splashes, and even high-pressure jets. Depending on the model, they can be used in sensitive environments such as ATEX zones or controlled environments.

Our **Weepro** and **Weejet** ranges are certified as Category III PPE.

Want to identify shoe covers that incorporate recycled materials in their composition?

LOOK FOR THE LOGO!

NEW RANGE OF SHOE COVERS

MADE FROM RECYCLED MATERIALS

Our shoe covers, **made in France**, have evolved and now incorporate a significant amount of recycled materials in their composition.

We have worked to offer you eco-designed shoe covers that guarantee the same durability and anti-slip effectiveness.

- Shoe covers 100% PP without Sole, made from 90% recycled materials
- Shoe covers PP + Sole, made with at least 60% recycled materials

CLASSIC & ECONOMIC RANGE

CPE OU PE
SHOE COVERS OR BOOT COVERS

They are resistant to non-hazardous liquid splashes. They are recommended for very short-duration applications and are ideal for visitors.

PERSONAL & MEDICAL CARE

Our range and applications

96

PERSONAL & MEDICAL CARE

OUR RANGE & APPLICATIONS

We offer a complete range of hygiene and patient care products. Whether for personal hygiene, patient comfort, or cleanliness of their environment, we provide hygiene and care products tailored for various specific uses: wash gloves, spunlace or airlaid wipes, bibs...

OUR WASH GLOVES

APPLICATION

The optimal solution for patient hygiene and personal care.

THE DIFFERENT MATERIALS:

NEEDLE PUNCH 100% POLYESTER

Soft, felt-like touch
Durability and absorbency

AIRLAID + PE

Softness
Durability and absorbency
Waterproof

SPUNLACE

Soft textile-like feel
Durability
High absorbency

OUR WIPES

APPLICATION

- Allows for **easy wiping** during personal hygiene and body care, without irritating the skin for **maximum softness**.
- When in contact with water, the product **does not lint or disintegrate**. It remains durable whether dry or wet.
- **Multi-use:** recommended for personal hygiene, as well as for wiping and cleaning surfaces.

THE DIFFERENT MATERIALS:

AIRLAID PLAIN OR EMBOSSED

Softness and durability in both wet and dry conditions
High absorbency

SPUNLACE

Extreme softness
Textile-like feel
High absorbency
Extreme durability

WIPING FORMAT CELLULOSE/POLYPROPYLENE 65 G/M²

- Low releasing, does not scratch
- High absorption capacity
- Very strong and elastic
- Resistant to acids and solvents

REF.				
WT-W-04		38 x 30 cm	Without sub-packaging	390 u x 1

WIPING FORMAT CELLULOSE/POLYPROPYLENE 65 G/M²

- Low release, does not scratch
- High absorption capacity
- Very strong and elastic
- Resistant to acids and solvents

REF.				
WT-W-01		42 x 35 cm	Without sub-packaging	260 u x 1

WIPING FORMAT CELLULOSE/POLYPROPYLENE 65 G/M²

- Little releasing, does not scratch
- Great absorption capacity
- Strong and elastic
- Resistant to acids and solvents

REF.				
WT-B-05		38 x 30 cm	Polybag	44 u x 10

WIPING FORMAT CELLULOSE/POLYPROPYLENE 68 G/M²

- Low releasing, does not scratch
- High absorption capacity
- Resistant to bases and solvents

REF.				
WT-E-02		33 x 60 cm	Polybag	50 u x 14

**WIPING FORMAT
CELLULOSE/POLYESTER 55 G/M²**

- Low lint, non-abrasive
- High absorption capacity
- Resistant to acids and solvents

REF.				
WT-L-01	38 x 30 cm	Reel	300 u x 1	

**WIPING FORMAT
CELLULOSE/POLYESTER 55 G/M²**

- Low release, does not scratch
- High absorption capacity
- Resistant to acids and solvents

REF.				
WT-L-02	38 x 30 cm	Polybag	50 u x 10	

**WIPING FORMAT
CELLULOSE/POLYESTER 75 G/M²**

- Little release, does not scratch
- High absorption capacity
- Resistant to acids and solvents

REF.				
WT-F-02	38 x 30 cm	Without sub-packaging	50 u x 10	

**WIPING FORMAT
CELLULOSE/POLYESTER 75 G/M²**

- Low release, does not scratch
- High absorption capacity
- Resistant to acids and solvents

REF.				
WT-F-03	38 x 30 cm	Reel	500 u x 2	

**WIPING FORMAT
CELLULOSE/POLYESTER 55 G/M²**

- Little releasing, does not scratch
- High absorption capacity
- Resistant to acids and solvents

REF.				
WT-L-03	38 x 30 cm	Reel	500 u x 2	

**WIPING FORMAT
CELLULOSE/POLYESTER 75 G/M²**

- Low release, does not scratch
- High absorption capacity
- Resistant to bases and solvents

REF.				
WT-FS-01	38 x 30 cm	Dispenser box	200 u x 1	

**WIPING FORMAT
100 % VISCOSE**

- Flexible & soft, not very linty
- Does not scratch
- For dry & wet use
- High absorption capacity
